Dear Parent/Carer

Re: Graphical Display Calculator for A Level Maths

In the study of A-level Mathematics students are expected to develop skills in the accurate and efficient use of contemporary calculator technology.

In order to allow students the best opportunity to develop these skills the Mathematics Department advises the use of a graphical calculator. The model that we recommend is the **Casio FX-CG100**

The advanced capability of the graphical calculator is reflected in its cost at **£81.55**. To keep the price to a minimum the Mathematics Department will make a bulk order on behalf of the students who wish to make a purchase.

The Department encourage students who no longer need the calculator at the end of their course to sell it on at a reduced cost to new AS Maths students. Second hand graphical calculators may be available from year 13 students or they can be found on websites such as Amazon. We feel that the price we offer is very competitive but encourage students to purchase the recommended model from their preferred source.

You can order a calculator via parentpay www.parentpay.com.

Please note that once you have committed to payment all monies paid will be non-refundable should your child change their mind.

Any payments for graphical calculators need to be made by the end of Wednesday 23 September after which the order will be made.

Yours sincerely

Mr Stefan Fotheringham
Maths Department
